

Project Goal

Improve utilization of integrated Maternal, Newborn, Child Health, Family Planning and Nutrition (MNCH/FP/N) services.

Objectives

Increase availability and quality of high impact interventions through strengthening district level local management and health system.

The Project Approach

MaMoni HSS focuses on strengthening the systems and standards for maternal, newborn, child health, family planning and nutrition (MNCH/FP/N) that will result in declines in maternal, newborn and child mortality at scale.

The project's inputs are aligned to improve performance and capacity of the district health systems which in turn ensures that interventions result in increased access to and utilization of services by the most vulnerable.

Project Duration

September 2013-September 2017

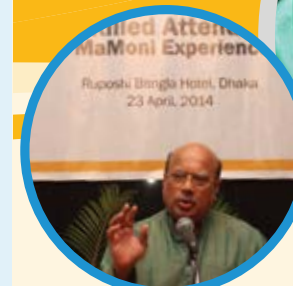

Health Systems Strengthening at District Level

- Integrated delivery of MNCH/FP/N services at all levels
- Leadership and management capacity development for MOH&FW managers
- Data driven decentralized planning and performance setting
- Joint performance reviews at upazila and district levels involving key departments and stakeholders
- Comprehensive quality assurance system for health facilities
- Strengthened supportive supervision
- Improving logistics management of life saving commodities
- Comprehensive information systems
- Human resource planning and management
- Strengthening birth registration
- Local government engagement for resource mobilization, improved accountability

Partnership with community agents

- Volunteers and community action groups for every 250 population
- Community microplanning to link volunteers to the formal health system
- Strategic behavior change communication activities to promote household level healthy behaviors
- Strong referral networks and link to higher levels facilities to manage complications
- Strengthening family planning counseling and referral by community volunteers

National Level Initiatives of MaMoni HSS

- Scale up Helping Babies Survive (HBS) package for newborns
- Expansion of mobile based Aponjon - an mHealth initiative
- Technical assistance to DGFP to strengthen round the clock normal delivery services at union health & family welfare centres (UH&FWCs)
- Support to roll out misoprostol to address postpartum hemorrhage
- Partnership to introduce fully automated Routine Health Information Systems
- Partnership with Saving Newborn Lives (SNL) and UNICEF to scale up newborn initiatives
- Support to MOH&FW for human resource planning and management

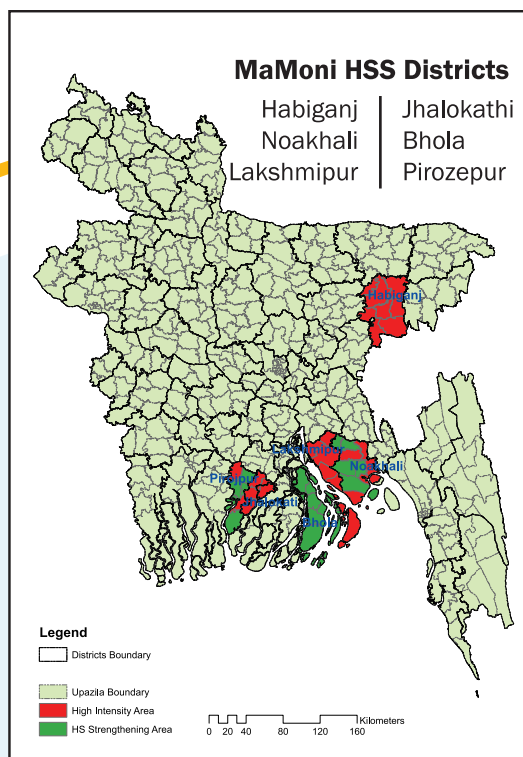

Project Reach

- In 23 sub-districts, MaMoni HSS implements a comprehensive package of health systems strengthening activities
- In additional 17 sub-districts, MaMoni HSS builds the capacity of the MOH&FW to address health systems bottlenecks to improve service coverage and quality

12 million population

Districts - 6	District Hospitals - 6
Upazilas - 40	MCWC - 10
Unions - 377	UHC - 33
	UH&FWC - 329
	Community Clinics - 1107

Primary partner:

MOH&FW

Project partners:

Technical Partners

Jhpiego	Save the Children
John Snow, Inc. (JSI)	BSMMU
icddr,b	Dnet

District Implementation

FIVDB	Shimantik
BEES	DSK
RIC	PHD
